

The simple way to save water, energy and sewage costs.

FLOWCo
MARIFLO VALVES

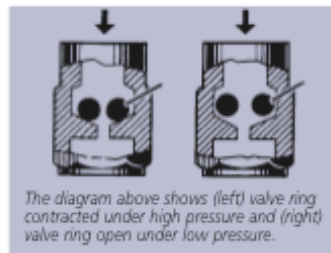

Fitting a Mariflo valve couldn't be simpler - as shown above the valve fits between the shower head and the inflow pipe and immediately starts saving money.

LOW COST, self cleaning Mariflo Valves tested and proved in industry for over 35 years.

Simple to install on showers and taps, saving their cost often in just a few weeks.

The single control opening contracts automatically as pressure rises so that the maximum flow continues to remain constant.

The diagram above shows (left) valve ring contracted under high pressure and (right) valve ring open under low pressure.
